

Using Statistical Package for the Social Sciences (SPSS): Part I

Melissa Pirrie

Larkin Lamarche

Caveats

- SPSS is only one software to store and analyze data
- There was a skill builder done in 2017
 - X:\Training and Resources\Knowledge and Skills Builder Sessions\Software\SPSS June 2017

Learning objectives

1. Name the two 'views' of SPSS and describe their function
2. Identify 3 ways to get data into SPSS
3. Identify the parts of database structure in SPSS
4. Understand how to check the integrity of your database structure
5. Understand some simple ways to check the quality of your data
6. *Apply these methods of checking to data output*

Two 'views'

1. Variable view

- Is done first
- Sets up the database structure to tell data how to behave

2. Data view

- Houses the data
- 'how' it behaves is directed by variable view

dataset example for skill builder.sav [DataSet1] - IBM SPSS Statistics Data Editor

19	113	2	2	2	1	.	74	1	0	.	3	.

Data View Variable View

Getting data into SPSS

1. Direct entry
2. Import from REDCap
3. Import from CSV file

dataset example for skill builder.sav [DataSet1] - IBM SPSS Statistics Data Editor

	record_id	randomization	site	clinic	status	withdrawal date	age	ethnicity	fall	fall number	satisfaction1_t0	satisfaction2_t0
1	77	2	1	1	1	.	85	1	1	1	3	.
2	78	1	1	1	1	.	79	1	0	.	1	.
3	79	1	2	1	1	.	82	1	1	2	2	.
4	80	2	1	1	1	.	83	1	0	.	2	.
5	81	1	1	1	1	.	75	1	0	.	3	.
6	82	1	1	1	1	.	74	1	0	.	2	.
7	83	1	2	2	1	.	75	1	0	.	2	.
8	84	1	1	1	1	.	70	1	0	.	3	.
9	85	1	1	2	1	.	79	1	0	.	3	.
10	86	2	1	1	1	.	74	1	0	.	3	.
11	87	2	2	1	1	.	71	1	0	.	2	.
12	106	2	1	2	1	.	70	1	1	2	3	.
13	107	2	3	1	4	10/30/2...	85	1	1	1	1	.
14	108	1	1	2	2	07/04/2...	89	1	0	.	.	.
15	109	1	1	1	1	.	71	1	1	1	3	.
16	110	1	1	2	1	.	83	1	0	.	1	.
17	111	2	1	1	1	.	70	1	0	.	3	.
18	112	2	1	2	1	.	79	1	0	.	3	.
19	113	2	2	2	1	.	74	1	0	.	3	.

Data View Variable View

Database structure

- In 'variable view'
- Parts of the database
 - Name
 - Type
 - Width
 - Decimals
 - Label
 - Values
 - Missing
 - Columns
 - Align
 - Measure
 - Role

dataset example for skill builder.sav [DataSet1] - IBM SPSS Statistics Data Editor

Formatting

Data View Variable View

IBM SPSS Statistics Processor is ready

Database re-structuring

- Correct any errors
 - variable types (numeric/string)
 - measure type (scale, nominal, categorical)
- Enter missing information
 - Variable and value labels
- Recode variables
 - Imported as string
 - Require manipulation to be interpreted

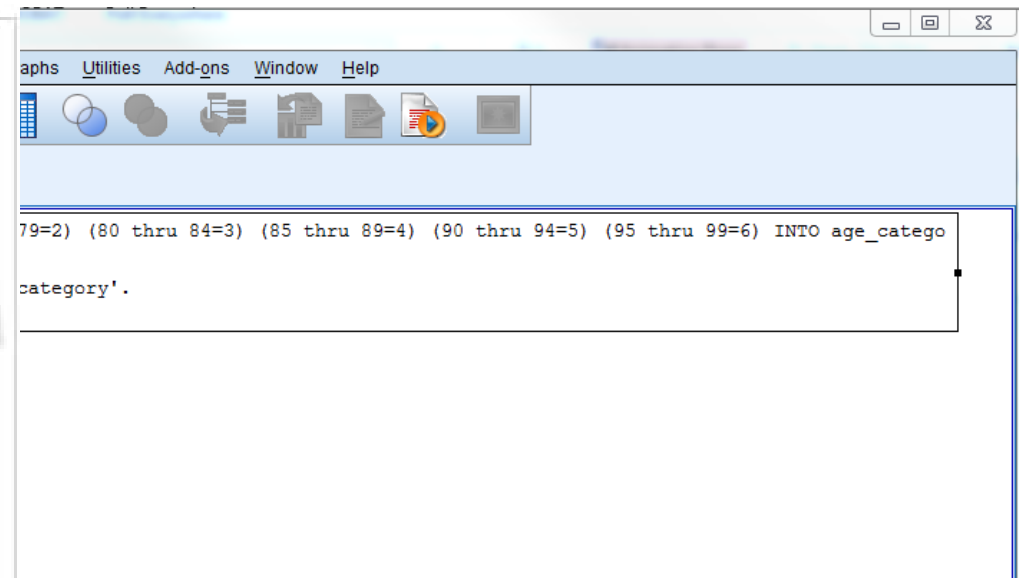

The screenshot shows the IBM SPSS Statistics Data Editor interface. The title bar reads '*Untitled2 [DataSet1] - IBM SPSS Statistics Data Editor'. The menu bar includes File, Edit, View, Data, Transform, Analyze, Direct Marketing, Graphs, Utilities, Add-ons, Window, and Help. Below the menu bar is a toolbar with various icons. The main area displays a table with the following columns: Name, Type, Width, Decimals, Label, Values, Missing, Columns, Align, Measure, and Role. The table contains five rows of data:

	Name	Type	Width	Decimals	Label	Values	Missing	Columns	Align	Measure	Role
1	Participant_ID	Numeric	12	0		None	None	12	Right	Scale	Input
2	AGE	Numeric	12	0		None	None	12	Right	Scale	Input
3	SEX	String	1	0		None	None	1	Left	Nominal	Input
4	BMI	Numeric	12	0		None	None	12	Right	Scale	Input
5											

Time Saving Tip!

- Syntax shows up in the output window
- File -> New -> Syntax

Checking data quality: Visual checks

1. Visual checks

- In ‘data view’
- Literally scrolling through your data to check for:
 - Missing data patterns (random versus systematic)
 - Logic of data
 - Odd values
 - Sample size/group sizes
 - » Data completeness

Checking data quality: 'Run' checks

1. 'Run' checks

- Analyze -> Descriptive or Frequencies
 - Are data within the possible range of scores?
 - What does the variability look like?
- Cronbach's alpha for survey
 - Does the survey show good internal consistency? ($\alpha \geq .70$)
 - Is it too high? ($\alpha \geq .90$)
 - Analyze -> Scale -> Reliability analysis

2. Check assumptions for analyses

Common oopsies and fixies

Oopsy

- Frequency or other basic descriptives won't run
- Both mean and range are much higher than expected
- Mean seems okay but range is not
- You have output that no one else can interpret

Fixy (most likely)

- Variable type may have set itself to "string" from your imported data
- Variable "measure" may be incorrectly set to nominal (if scale) or scale (if nominal)
- Your data has "99" or "999" for missing values and you haven't shared this info with SPSS
- Data entry error or issue with recoding
- Add value labels!

The data structure has to be set before entering data – you can do simple checks to ensure the integrity of the structure and the data before analysis

Learning objectives

1. Name the two 'views' of SPSS and describe their function
2. Identify 3 ways to get data into SPSS
3. Identify the parts of database structure in SPSS
4. Understand how to check the integrity of your database structure
5. Understand some simple ways to check the quality of your data
6. *Apply these methods of checking to data output*

SPSS Basics Part 2 will be in four weeks...
